

Finding business relevance in IT. Our Expertise.

InfoSec - Service lines offered (simplified)

Today's companies face many Information security (InfoSec) challenges. Our clients also value **CIO Eureka** recognized strengths in strategy, organization, and operations, as well as the broad strategic lens we apply to InfoSec creating competitive advantage and optimizing business performance.

(1) Enterprise InfoSec Operations

- Focused on the basic operations an InfoSec organization should perform: policies and standards, vulnerability management, risk assessments, accountability and reporting. .

(2) Secure Coding Lifecycle

- Provide tools and training to ensure code being developed internally or being sourced from third parties meets the quality criteria of the organization and meets external security and quality requirements.

(3) Vendor Risk Assessment

- Provide project management and assessment services to evaluate current vendors, methods for identity management, software development, including source code escrow and content providers.

(4) Enterprise Information Security Assessment

- Resource Optimization. Gap analysis against target compliance goals. Find areas for investment, tooling or sourcing.

(5) Enterprise InfoSec Maturity Framework

- CIO Eureka's framework. Maturity & development training plans tailored to full scope of information activities—both strategically and from a business-value-added perspective—and help clients optimize their InfoSec function.

(6) Executive Business Advisory Services

- Manage risk and continuity of business by giving value to all data within the enterprise, regardless of location, type or source.
- Create a strategy for ongoing understanding of the level of effort required to meet the changing regulatory landscape, even for unregulated entities.
- Generate clear maps of duties and responsibilities, ensuring insiders are integral to the overall security of the organization.
